PROFILE

B.Tech Computer Science graduate with foundational knowledge of Python, machine learning and deep learning, built through academic projects. Familiar with Data Structures, DBMS, OOP and AWS cloud basics, including a serverless deployment project. Seeking an entry-level Software Engineer / Python Developer role.

EDUCATION

B.Tech, Computer Science & Engineering (Lateral Entry) *2023 – 2026*
DRIEMS University, Tangi, Kataka | CGPA: 7.11

- Key coursework: Data Structures, Software Engineering, Cloud Computing

Diploma, Computer Science & Engineering *2020 – 2023*
DRIEMS Polytechnic, Kataka | Percentage: 74.6%

- Key coursework: Python Programming, Data Structures

Class X *2020*
DAV Public School, CDA, Kataka | Percentage: 67.4%

SKILLS

Programming: Python, SQL
Cloud: AWS Lambda, S3, CloudWatch (serverless deployment project); basic cloud knowledge
Machine Learning & Deep Learning: Scikit-learn, TensorFlow, Keras, TensorFlow Lite, Pandas, NumPy
Computer Vision: OpenCV, CNN
Tools: Google Colab, Jupyter Notebook, Kaggle, Matplotlib, Seaborn, basic Linux and Git commands
Core Concepts: Data Structures & Algorithms, DBMS, Operating Systems, OOP, Predictive Modeling, EDA
Soft Skills: Public Speaking, Problem Solving, Critical Thinking, Fast Learner

PROJECTS

Waste Classification Using Deep Learning (CNN), Deployed on AWS

- Built a CNN from scratch on 22,500+ Kaggle images (Organic vs Recyclable), reaching ~91% validation accuracy; converted to TensorFlow Lite for lightweight inference.
- Deployed as a serverless pipeline on AWS Lambda, triggered via S3 event notifications for batch image classification and via a public Lambda Function URL powering a live web demo (GitHub Pages), with CloudWatch logging every prediction.
- Technologies: Python, TensorFlow/Keras, TensorFlow Lite, AWS Lambda, S3, CloudWatch, boto3, HTML/CSS/JS
- Live demo: aptx44869.github.io/waste-management-aws | Code: github.com/Aptx44869/waste-management-aws

Breast Cancer Prediction Using Machine Learning

- Built classification models on the Wisconsin Breast Cancer dataset (569 records, 33 features) from Kaggle.
- Compared SVM, Logistic Regression and other algorithms; SVM gave the best F1-score of 95%.
- Technologies: Python, Scikit-learn, Pandas, NumPy, Google Colab
- Code: github.com/Aptx44869/breast-cancer-prediction-ml

Landslide Prediction System Using Machine Learning

- Built models to forecast landslide risk from environmental features.
- Applied Logistic Regression, Decision Tree and Random Forest, with data preprocessing, feature engineering and a 75:25 train-test split.
- Technologies: Python, Scikit-learn, Pandas, Matplotlib, Kaggle
- Code: github.com/Aptx44869/landslide-prediction-ml

AWARDS & ACHIEVEMENTS

- 3rd Position, IIT G20 Debate Competition (2023)
- 3rd Position, All Odisha Polytechnic Fest Debate Competition (2022)
- Multiple state-level debate competition awards
